

The ISA100 Kit UWB is an evaluation kit designed to present and test the capabilities of an ISA100 Wireless industrial communication stack ported onto an 802.15.4 UWB physical layer.

The IK UWB allows developers, integrators and users to test the capabilities of the communication stack and jump start their application faster and with less internal effort.

The kit includes a software application to simulate wireless monitoring and control over a highly reliable, standards-based industrial wireless network.

The product is of interest in the areas of avionics, automotive and oil & gas industries.

## UWB Software Application

\*The PC application for configuring and running the wireless statistics

## The product case contains:

- 4 x VN360 UWB nodes
- 1 x VN360 gateway
- 5 x FTDI USB cable
- User manual
- USB stick with PC application and documentation
